

Growth Chart by Breed

February 8, 2021

These growth charts present growth objectives for the 50 and 90 percentile rankings. They allow tracking for weight, hip height and wither height.

The weight curve is an objective to target for the breed, for calving at 24 months and at optimal weight. The height curves (withers and hips) represent the actual data of the breed.

Holstein

Jersey

Canadienne

Brown Swiss

Ayrshire
