

Polyunsaturated (Ruminal Biohydrogenation)

NOTE
The elements presented here are simplified solutions. Since each farm is unique, it is strongly recommended to always consult a nutritionist and evaluate the economic impact of each change applied.

****Herds on pasture will have high polyunsaturated fatty acids, due to the high intake of polyunsaturated fatty acids from the grass consumed.**

If the **de novo** are high, the level of **Polyunsaturated** is usually not critical for ruminal health.
